**DETAILED ACTION*****Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Mellet et al., US No. 20030098549 ("Mellet").

Mellet discloses a dynamic shaft seal component (FIG. 1), comprising; a disc that is generally flat and annular in shape (FIG. 4) having an outer perimeter and an inner perimeter for receiving a shaft, said disc comprising a mixture of PTFE resin powder (page 1, paragraph 17) and a susceptor material (graphite, page 1, paragraph 17), said *susceptor material rendering said mixture sinterable using microwave energy so that said PTFE resin powder and said susceptor material are crosslinked to form said disc.*

The susceptor material is comprised of graphite.

The mixture of PTFE resin powder and the susceptor material is a generally homogenous mixture (i.e. the graphite is indistinguishable from the entire seal after mixing) .

Examiners note: using microwave energy to form the disc is given very little patentable weight b/c it is a process limitation in a product claim.
